

FYFANON® PLUS ULV insecticide is an efficient and effective way to control insects in cotton.

INSECTS CONTROLLED

FYFANON® PLUS ULV effectively controls adult and nymph plant bugs, stinkbugs, budworm, bollworm and flea hoppers. It also controls many other cotton pests like leafhopper, cotton leaf perforator, cotton aphid and fall armyworm. When used in a program approach for season-long control and resistance management, FYFANON PLUS ULV provides efficiency, knockdown and residual control.

KEY FEATURES

- FYFANON® PLUS ULV is a premix of Cheminova's newest generation pyrethroid, gamma cyhalothrin, and the proven performer, malathion-an industry standard.
- The pyrethroid component provides control of key cotton pests, like tarnished plant bug nymphs or stink bugs, with broad spectrum residual control.
- The malathion component provides superior performance against adult plant bugs, brings added control for stink bugs, plus a wide range of other insects with no phytotoxicity concerns.
- FYFANON PLUS ULV is applied at 12 to 16 fluid ounces per acre with enough refined vegetable oil added to make a total spray volume of 32 fluid ounces. (ULV applications are very efficient and most aerial applicators can spray several hundred acres with just one tank.)
- Excellent knock down and residual control means FYFANON PLUS ULV may offer opportunities to reduce the number or frequency of applications.

ACTIVE INGREDIENTS:

Gamma cyhalothrin and malathion

FORMULATION: Liquid

MODE OF ACTION:

Sodium channel modulator and AchE inhibitor

TIMING:

Stink bugs – when scouting indicates need to spray

Tarnished plant bugs – after first flower, within planned program for control

Other insects – when scouting indicates need to spray

RESTRICTED USE: Yes

SIGNAL WORD: Warning

PACKAGING: 55-gallon drums. Four drums or 220 gallons per pallet.

APPROVED VEGETABLE OIL PARTNERS:

To increase the total spray volume to 32 ounces per acre, add the appropriate amount of an approved, once-refined vegetable oil to make up the difference. Approved products include AMIGO®, SOY-DEX® and Soysurf®. Check with your Cheminova representative or local dealer for additional approved products. Petroleum or paraffin based oils should not be used with FYFANON PLUS ULV.
