

Response of maturity group V late soybean cultivars to frogeye leaf spot (FLS) from the MSU OVT trial conducted at Verona, MS during 2023.

Company/Cultivar	FLS rating ^{1,2}
Innictis A5813XF	1.0 a
Progeny 5751XF	0.0 b
MSE	0.0
CV (%)	0.0
<i>P</i> -value for F-statistic	<0.0001

¹Frogeye leaf spot observation was conducted by observing the foliage in the upper third of the canopy for the presence of lesions associated with FLS. Ratings were given for each individual plot and then averaged for the three replicate plots of each cultivar. Plots were evaluated on a 0-9 scale.

²Means followed by the same letter(s) within a column are not significantly different according to Fisher's Protected LSD ($P=0.05$).
